# Alternate Text

- The figures above are bar charts showing the number of US overdose deaths involving prescription drugs, opioid analgesics, benzodiazepines, cocaine, or heroin from 2001 to 2013. The charts are overlaid by line graphs showing the number of deaths by males and females. The highest rise was seen for deaths involving heroin with a 5-fold increase from 2001 to 2013. This was followed by deaths involving benzodiazepines with a 4-fold increase and deaths involving prescription opioid pain relievers showing a 3-fold increase. Cocaine deaths increased by 29% over the same period.
