Risk Behavior Questionnaires Instructions and Notes

These questions are to be asked during Baseline, Day of Release, and every month during the follow-up phase.

Questionnaire Time Frames:

Baseline: 90 days prior to incarceration

Day of Release (DOR): last 30 days of this incarceration

Post Release interviews: in the past 30 days.

The bolded sections are instructions for the interviewer. Each questionnaire begins with instructions and glossary terms to be read to the client. Each question should be asked with respect to the time-point of the interview. A different version of the questionnaire with the appropriate timeframe can be created for each time-point (baseline, DOR, post-release) to reduce the possible error of using the incorrect wording. To summarize, there are at least 3 timepoints at which this measure can be administered: Baseline (which assesses the 90 days prior to the incarceration); Day of Release (which assesses the last 30 days of incarceration); and Post Release (which assesses the past 30 days).

The coding for the multiple choice questions are provided in the interview (can be deleted from the version given to the clients).

The Sexual Risk Behavior Questions contains sections for Vaginal, Anal Receptive, and Anal Insertive Sex (male clients only), are divided into questions for a single sexual partner and multiple sexual partners, with each being subdivided into the three HIV statuses section. To ensure consistency in the reported risk behavior the bolded instructions remind the interviewer to check the responses of previous answers ie: the bolded instructions on page 2: **'SRB7 cannot be larger than SRB6. You reported using a condom more times, than times you reported having sex. Please correct those responses and continue to Anal Receptive Sex Questions.'** A client cannot report having sex 20 times in the previous question (SRB6), and report using a condom 22 times (SRB7).

Similar to the Sexual Risk Behavior Questions, the Injection Drug Use Questions are divided into sections (sharing works or cooker) for multiple person responses, and the three different HIV statuses. Similar to the Sexual Risk Behavior, there are bolded instructions for interviewers to check the consistency of the clients' responses.

Sexual Risk Behavior (pre-prison)

Interviewer read: This survey is going to ask you sensitive questions about your sexual behavior and HIV risk before you were in prison. This information is solely being used for research purposes and will not in any way be shared with prison staff, your parole officer, or anyone else not on our study team. The information you provide is not being linked to your name. This information is strictly confidential. Please be as honest as possible. Thank you.
